

23 삼각형의 합동 조건

핵심개념

삼각형의 합동 조건: 다음의 각 경우에 두 삼각형은 서로 합동이다.

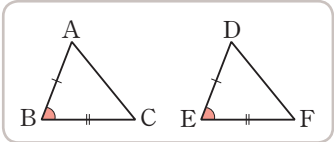

(1) 대응하는 세 변의 길이가 각각 같을 때

→ $\overline{AB}=\overline{DE}$, $\overline{BC}=\overline{EF}$, $\overline{CA}=\overline{FD}$ 이면
 $\triangle ABC\equiv\triangle DEF$ (SSS 합동)

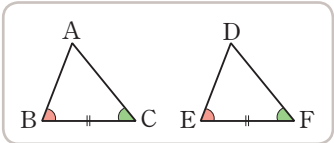

(2) 대응하는 두 변의 길이가 각각 같고, 그 끼인각의 크기가 같을 때

→ $\overline{AB}=\overline{DE}$, $\overline{BC}=\overline{EF}$, $\angle B=\angle E$ 이면
 $\triangle ABC\equiv\triangle DEF$ (SAS 합동)

(3) 대응하는 한 변의 길이가 같고, 그 양 끝 각의 크기가 각각 같을 때

→ $\overline{BC}=\overline{EF}$, $\angle B=\angle E$, $\angle C=\angle F$ 이면
 $\triangle ABC\equiv\triangle DEF$ (ASA 합동)

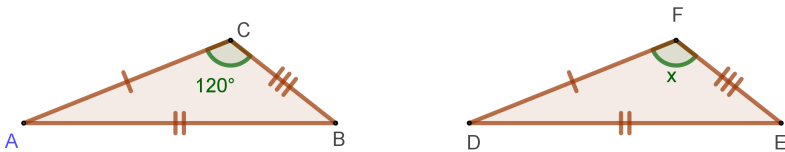

참고 SSS 합동, SAS 합동, ASA 합동에서 S는 변(side), A는 각(angle)의 첫 글자이다.
